USING ICD-10-AM

CONVENTIONS USED IN THE ICD-10-AM TABULAR LIST

1. FORMAT

1.1 General format

The format of the Tabular List is largely the same as the format of the WHO ICD-10 with the exception of the spelling conventions (see *ICD-10-AM Tabular List/Introduction/Development of ICD-10*). The Tabular List uses an overall block format for ease of reference, with an indented format applying to all *Inclusion* terms and *Instructional* terms/notes exceeding one line of text.

Note(s)

1. The Tabular List is divided into:
 - **Chapters** — There are 22 chapters, based on ICD-10 titles.
 - **Blocks** — The chapters are subdivided into blocks of three character categories, which have formal headings (such as block I10–I15, see Example 27). A range of categories without a formal heading is not a block (such as categories M80–M81, see Example 24).
 - **Categories** — Within a block, a three character category may be for a single condition (such as category I10, see Example 3), or for a group of diseases with common characteristics (such as category I12, see Example 1).
 - **Subcategories** — Many categories are further divided into subcategories (such as subcategory C95.0, see Example 2).

1.2 Text boxes

1.2.1 Black reverse text boxes are used for three character codes. They are **not valid** and **cannot** be assigned, as fourth and/or fifth characters are required (see Example 1).

Example 1:

Tabular List: **I12 Hypertensive kidney disease**

Rationale: Black reverse text box — for a three character code that is not valid. A fourth character is required with I12 (*Convention 1.2.1 and Note 1*)

1.2.2 Grey text boxes are used for four character codes. They are **not valid** and **cannot** be assigned, as fifth characters are required (see Example 2).

Example 2:

Tabular List: **C95.0 Acute leukaemia of unspecified cell type**

Rationale: Grey text box — for a four character code that is not valid. A fifth character is required with C95.0 (*Convention 1.2.2 and Note 1*)

1.2.3 A box outline is used for valid three character codes (see Example 3).

Example 3:

Tabular List: **I10 Essential (primary) hypertension**

Rationale: Box outline — for a valid three character code (*Convention 1.2.3 and Note 1*)
